Amendments to the Claims

Claim 1 (Currently amended): A computerized method of creating a program management chart comprising the steps of:

displaying a plurality of tasks within a selected set of data as a first part of the program management chart;

displaying a task that is outside of the selected set of data but that is associated with at least one of the plurality of tasks within the selected set of data as a second part of the program management chart; [[and]]

differentiating within the program management chart between the plurality of tasks within the selected set of data and the task that is outside of the selected set of data; and

limiting the displaying of the task that is outside of the selected set of data only to those tasks that are associated with at least one of the plurality of tasks within the selected set of data.

~~wherein a shape of the task that is outside of the selected set of data is used to differentiate the task that is outside of the selected set of data from the plurality of tasks within the selected set of data.~~

Claim 2 (Canceled)

Claim 3 (Original): The method of claim 1 wherein the task that is outside of the selected set of data is outside of a project that contains the selected set of data.

Claims 4-11 (Canceled)

Claim 12 (Currently amended): A computerized method of creating a program management chart comprising the steps of:

accessing a subset of data within a project;

App. No. 10/690,392

Amendment E

Page 3

displaying in the program management chart a plurality of tasks that are part of the project and associated with the subset of data;

displaying a task that is part of the project and is outside of the subset of data in the program management chart at the same time as the plurality of tasks that are part of the project and associated with the subset of data; [[and]]

differentiating between the plurality of tasks that are part of the project and associated with the subset of data and the task that is part of the project and is outside of the subset of data;
and

limiting the displaying of the task that is outside of the subset of data only to those tasks that are associated with at least one of the plurality of tasks associated with the subset of data.

~~wherein a shape of the task that part of the project and is outside of the subset of data is used to differentiate the task that part of the project and is outside of the subset of data from the plurality of tasks that are part of the project and associated with the subset of data.~~

Claim 13 (Canceled)

Claim 14 (Canceled)

Claim 15 (Original): The method of claim 12 further comprising the step of accessing a header relating to the task that is outside of the subset of data.

Claim 16 (Previously presented): The method of claim 1 further comprising accessing header data associated with at least one of the plurality of tasks within the selected set of data in order to display the task that is outside of the selected set of data.

Claim 17 (Previously presented): The method of claim 12 further comprising accessing header data associated with at least one of the plurality of tasks within the subset of data in order to display the task that is outside of the subset of data.

Claim 18 (Canceled)

Claim 19 (New): Claim 1 (Currently amended): A computerized method of creating a program management chart, comprising:

selecting a subset of data within a project; and
in response to the selecting of the subset of data:

identifying and displaying a plurality of tasks within the selected subset of data as a first part of a program management chart; and

identifying and displaying a task that is outside of the selected subset of data but that is associated with at least one of the plurality of tasks within the selected subset of data as a second part of the program management chart.

Claim 20 (New): The method of claim 19, further comprising:

limiting the displaying of the task that is outside of the selected subset of data only to those tasks that are outside the selected subset of data and are associated with at least one of the plurality of tasks within the selected subset of data.

Claim 21 (New): The method of claim 1, further comprising:

selecting the set of data within the project; and
in response to the selecting of the selected set of data:

initiating the displaying of the plurality of tasks within the selected set of data as the first part of the program management chart; and

initiating the displaying of the task that is outside of the selected set of data but that is associated with at least one of the plurality of tasks within the selected set of data as the second part of the program management chart without further selecting an additional set of data within the project.
